### Part One:

Read the following passage, then answer the questions below.

The work of a civil engineer is all around us. We travel on his roads, cross his bridges and drink water from his reservoirs. He works on every large building. He is also in charge of the structures that bring us electricity supplies and sanitary installations, sewage and garbage. A civil engineer works from the design stage until the construction is complete. Even when the construction is complete, his work is not over. He keeps working with maintenance engineer. A civil engineer must be able to survey a site, prepare drawings, estimate the cost of a structure and supervises its construction. He must have some knowledge of mechanical and chemical engineering so that he can work with experts in these subjects. He must learn all these during his basic training at his college, in practical work in a drawing office and on work site.
