## اختبار القبول للعام الجامعي 2019 - 2020م

Answer all the Questions

## Section I: Read the following passage and then answer the questions that follow:

The human heart is divided into four chambers, each of which serves its own function in the cycle of pumping blood. The atria are the thin-walled upper chambers that gather blood as it flows from the veins between heartbeats. The ventricles are the thick-walled lower chambers that

- Line receive blood from the atria and push it into the arteries with each contraction of the heart. The
- left atrium and ventricle work separately from those on the right. The role of the chambers on (5) the right side of the heart is to receive oxygen-depleted blood from the body tissues and send it on to the lungs; the chambers on the left side of the heart then receive the oxygen-enriched blood from the lungs and send it back out to the body tissues.
